

Our company chose, for its electricity supply, Certified Green Energy, that is energy coming from production facilities of renewable resources, contributing this way to the decrease of pollution and to the environment protection.

The origin of Certified Green Energy is guaranteed through the G.O. Certificates (Guarantee of Origin), introduced at European level by the Directive 2011/77 EC and subsequently in Italy by the D.M. of July 6, 2012. The Guarantee of Origin certificates are issued by the ESC (Electricity Supply Company), and state that a certain volume of electricity was produced with renewable energy resources. These certificates qualify the producers and the users of the Green Energy for their commitment in favor of the environment and their goal is to create a voluntary market system to incentivize the production of energy from renewable resources.

#### DEFENDING THE ENVIRONMENT: A REAL COMMITMENT

For a company, choosing to use only energy from renewable resources means investing in the future. It is a moral and economic responsibility. It is an important commitment that certifies the care for the environment and concretely contributes to its protection for the future generations.

#### ONE MORE REASON FOR A REASONABLE CHOICE

The consumers' choice today is not exclusively based on the service and products quality anymore. It also concerns the ethical level, the attention that companies pay to the world we are living in. For this, it is important to choose the companies that responsibly commit to using natural, renewable, clean energy resources.
